

SERVING SECTOR OF

LIGHTING

The unparalleled success of **LED technology** has ushered in a completely new era in lighting. In addition to the light source itself, the new technologies use sensors and controls that adapt light to different needs, while also adding in intelligent features. Lighting technology is used in numerous areas such as entertainment and show production, Smart homes or even in industrial applications and horticulture.

ELECTRONIC COMPONENTS

PRODUCT CATEGORIES

CIRCUIT PROTECTION
CONNECTORS

MEMORY
OPTOELECTRONICS

POWER MANAGEMENT
THERMAL MANAGEMENT

A wide range of high quality electronic and electromechanical components
