

Component Shortage?

Winslow manufactured the solution in 4 weeks

Don't let Component Availability risk your Production Line

Component shortages are not just about increased demand, a number of other factors such as production capacity, supply chain disruptions, technology migration and mergers & acquisitions contribute to product scarcity and decline.

Allocation cycles present a higher risk of procuring counterfeit products from the open market.

Using our trusted and proven Adaptic programme, Winslows experienced engineers identify a direct, form, fit & function alternative capable of mounting to your target board until supply of the original components stabilises.

Taking this route offers a speedy, cost effective option that won't jeopardise traceability, production targets will still be met and management pressure minimised

All we require from you is the affected component part number and we'll offer a resolution that integrates seamlessly with your manufacturing process.

Don't waste time! As soon as you start to see a likely shortage call us for a solution. **Be Proactive!**

- ◆ Purchase when you need to, reduce inventory and storage costs
- ◆ Diminish counterfeit risk
- ◆ No MOQ, fast delivery, volume production in as little as 4 weeks
- ◆ Form, Fit & Function, ready to use
- ◆ No NRE if deemed standard
